

## TRIZ Inventive Problem Solving Methodology

NASA, Oliver Mayer, 21. Oct. 2014

Imagination at work.

### **Challenges Today**

Extrapolation  $\leftrightarrow$  Retropolation

Starting today: how will it develop  $\leftrightarrow$  Coming from a vision: what does it need today

2 21. Oct .2014

### **Starting Point: DFSS Process**

Gaps identified in Conceptual Design Phase by DFSS Council in 2006

- Current approach is primarily brainstorming and then using trade-off tools to determine best compromise
- TRIZ is mentioned as a way to <u>solve</u> technical or physical contradictions, but very limited scope covered

### Where does TRIZ fit in?

Early Stages of Product Development

### **Conceptual Design Needs - Challenge the Process**

- Problem solving is like digging for treasure in a field
- \* If a hole already exists, our inclination is to dig it deeper
- \* The deeper the hole, the more difficult it is to see what's happening in other parts of the field
- \* If someone else comes along, we encourage them to jump in the hole with us
- \* The overall effect is called PSYCHOLOGICAL INERTIA

#### TRIZ - Theory of Inventive Problem Solving Теория Решения Изобретательских Задач

Genrich Altshuller – Looking for a Theory of Invention

Analyzed patent literature to develop TRIZ methodology; methods have been expanded over the years

### How was TRIZ Developed?

Method by Prof. Genrich Altshuller

- Evaluation of +200,000 patents
- Selection of 40,000 "highly innovative inventions"

Significant Enhancement to DFSS: It accelerates the innovation and idea finding process

7 21. Oct .2014

### **TRIZ the Principle**

### **TRIZ Methodology**

### Who is Using TRIZ today?

# Example

11 21. Oct .2014

Copyright © General Electric

### **Engineering Contradiction Example**

- You are an engineer who is in charge of designing the radiator for a new automobile. The new design specification requires you to reduce the coolant temperature without increasing the size of the radiator.
- You see that you have a technical contradiction.
- In conventional radiators, reducing the coolant temperature will require an increase the radiator volume since more fin area is needed for heat removal.
- Improving Feature: coolant temperature
- Degraded Feature: radiator volume

#### The Challenge:

#### Find an Innovative Solution to this Contradiction

### **Engineering Contradiction: Generalization**

#### What Parameter is improving and which parameter is worsening as a result?

- Weight of moving object 1.
- Weight of nonmoving object 2.
- Length of moving object 3.
- Length of nonmoving object 4.
- Area of moving object 5.
- Area of nonmoving object 6.
- 7. Volume of moving object
- 8. Volume of nonmoving object 22. Waste of energy
- 9. Speed
- 10. Force
- 11. Tension, pressure, stress
- 12. Shape
- 13. Stability of object
- 14. Strength

- 15. Durability of moving object 16. Durability of nonmoving object 17. Temperature 18. Brightness 19. Energy spent by moving object 20. Energy spent by nonmoving object 34. Repairability 21. Power
  - 23. Waste of substance
  - 24. Loss of information
- 25. Waste of time
- 26. Amount of substance
- 27. Reliability
- 28. Accuracy of measurement

- 29. Accuracy of manufacturing
- 30. Harmful factors acting on object
- 31. Harmful side effects
- 32. Manufacturability
- 33. Convenience of use
- 35. Adaptability
- 36. Complexity of device
- 37. Complexity of control
- 38. Level of automation
- 39. Productivity

IF I do XXXX **THEN Par. A improves** BUT Par. B gets worse

magination at work

- 14. Spheroidality Curvature 28 Mechanics substitution

29. Pneumatics and hydraulics 30. Flexible shells and thin films 31. Porous materials 32. Color changes 33. Homogeneity. 34.) Discarding and recovering 35. Parameter changes 36. Phase transitions 37. Thermal expansion 38. Strong oxidants 39.)Inert atmosphere 40. Composite materials

Note: All 40 principles may apply to solving the contradiction, though statistically the top level solutions for resolving this conflict are identified in the matrix grid based on the selected parameters. More than one set of parameters may apply to the contradiction.

### Focussed Search on Ideas for Solution

Two inventive principles that have been used to solve similar contradictions are: composite material and mechanical vibration.

- The *Composite Material* principle provides the basis for a potential radiator concept:
  - Augment the aluminum radiator with copper to increase the thermal conductivity and heat removal.
- Looking into *Mechanical Vibration* and heat transfer, you find that vibration increases turbulence and results in increases of over 20% in heat transfer. This leads to some ideas:
  - Vibrate the entire radiator to promote turbulence in the coolant and air.
  - Create turbulence in the air stream with surface texture on the radiator fins.

### Predictable Path of Innovation: Trends

# TRIZ at GE

18 21. Oct .2014

### Summary

- Basics of TRIZ are Not New 60+ Years Old
- Based on Successful Patents & Proven Technology
- Process for Creativity and Innovation Beyond Brainstorming Techniques
- Grounded in Fundamental Physics
- Integrates very well into DFSS fills key gap in Concept Development methods

### Innovation Methodology Based in Science
