 (address / phone / fax / e-mail)

Required Attachments

- ① USGS 7.5' MAP WITH STRUCTURE LOCATION PINPOINTED IN RED
- ② LARGE SCALE STREET, PLAT OR PARCEL MAP (available from most property appraiser web sites)
- ③ PHOTO OF MAIN FACADE, ARCHIVAL B&W PRINT OR DIGITAL IMAGE FILE
 If submitting an image file, it must be included on disk or CD AND in hard copy format (plain paper is acceptable).
 Digital image must be at least 1600 x 1200 pixels, 24-bit color, jpeg or tiff.

CONTINUATION SHEET

Narrative Description:

OPF-3 is an Industrial Vernacular style facility, which measures approximately 520 feet (ft) along the east-west axis, 250 ft along the north-south axis, and 95 ft in height, overall. It is composed of a central, two-story low bay, flanked on the west by a high bay (High Bay 3), or hangar, and on the east by the SSMEPF, completed in 1998. As originally constructed, the low bay measured roughly 222 ft in length (north-south), 52 ft in width (east-west), and 30 ft in height. It was built of a structural steel skeleton with insulated metal siding, and has a poured concrete slab foundation and a flat, built-up roof. In 1990, the low bay was renovated and enlarged, extending the plan 150 ft to the east and 25 ft to the south. The southern 25 ft and northern 52 ft became one-story areas, while the remainder of the low bay continued as a two-story structure. This addition used the same building materials as the original facility. High Bay 3 measures approximately 197 ft in length, 150 ft in width, and 95 ft in height. It has a steel skeleton, clad with insulated metal sheeting, a poured concrete slab foundation, and a flat, built-up roof. The SSMEPF to the east has a cross-shaped plan with approximate overall dimensions of 190 ft in length, 169 ft in width, and 50 ft in height. It is built of concrete block faced with pre-finished metal sandwich panels, and has a poured concrete slab foundation and a flat, built-up roof.

Within High Bay 3 is a structure of stationary and moveable platforms; the orbiter was positioned within the hangar so that its nose was at the north end. The low bay, inclusive of the addition, contained the service and support rooms for High Bay 3. The SSMEPF was divided into four main areas, excluding the mechanical and electrical equipment rooms. These include the Ground Support Equipment Maintenance and Storage area, the Horizontal Processing Area, the High Bay, and the Vertical Processing Area.

Explanation of Evaluation:

The Orbiter Processing Facility, High Bay No. 3 (OPF-3) is considered eligible for listing in the National Register of Historic Places (NRHP) in the context of the U.S. Space Shuttle Program (1969-2011) under Criterion A in the area of Space Exploration and under Criterion C in the area of Engineering. Because it has achieved significance within the past 50 years, Criteria Consideration G applies. The period of significance for OPF-3 is from 1987, the date of its completed construction, through 2011, the designated end of the Space Shuttle program. OPF-3 is significant as one of only two structures designed and built exclusively for orbiter pre-flight and post-landing processing. Included in this facility is the Space Shuttle Main Engine Processing Facility (SSMEPF), which is a one of a kind facility, designed specifically for the Space Shuttle's main engines. Under Criterion C, OPF-3 contains a large High Bay, with a platform system specifically designed around the shape of the orbiter. This system contains stationary platforms set at various levels, which provide access to the major areas of the orbiter. Each level is also fitted with moveable platforms for access to specific components. In addition, a clean room environment is provided around the payload bay, when the doors are open. Learning from the first OPF (High Bay Nos. 1 and 2), OPF High Bay No. 3 was designed for the easier flow of the ground support equipment to support Shuttle processing. OPF-3 also houses the SSMEPF, which was designed specifically to process the Space Shuttle's main engines. Like the orbiter high bay, it contains platforms that fit around the engine, providing access to the main components. This uniquely designed equipment, rather than the building's exterior shell, provides the basis for the OPF-3's eligibility under Criterion C.

In addition to its individual eligibility, the OPF-3 is considered a contributing resource to the Orbiter Processing Historic District (8BR1990).
